

Model Specifications

Design Features

Made from curved clear toughened glass, this clean and simple fire screen increases the safety of an open fire without compromising the view of the flame. It features two handles positioned on either side.

The Fire Screen Duo is designed for use with any fireplace in units, apartments, houses, and commercial premises including offices, bars & restaurants.

Construction Detail

The Fire Screen Duo is made of 8mm [.032in] toughened Starfire (low iron) glass with an adequate curve for stability.

The Fire Screen Duo comes with 3 little plastic feet at its base. They are there to protect the glass from hard surfaces such as tiles & concrete floors. They also add to the overall stability and increase safety.

All edges are polished.

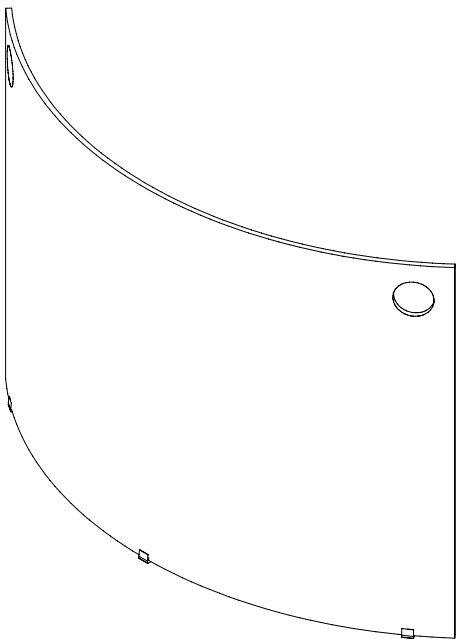

Installation

The Fire Screen Duo does not require any assembly. It is delivered in one package. Simply unpack and put into position in front of the fireplace. The floor must be level.

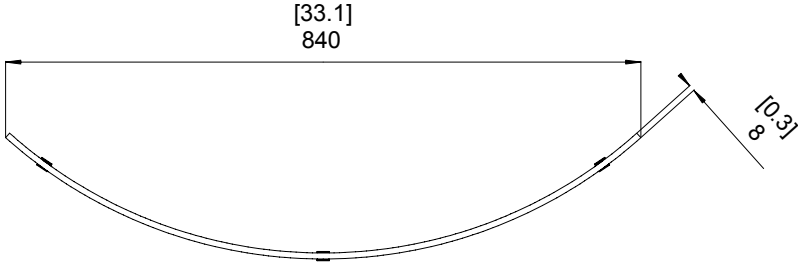

The glass can get hot. Handle carefully.

Important!

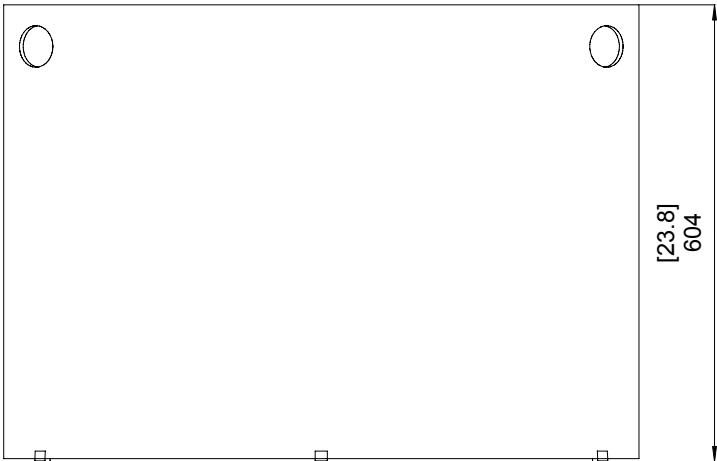

The glass used in the EcoSmart™ Fire Screen Duo, is toughened glass which means it is stronger than normal glass and can withstand high temperature variations. Importantly, even though it is stronger, toughened glass still has weaknesses. The corners and sides are specific pressure points where it is more fragile and can break if care is not taken. In the case of breakage, toughened glass will shatter into small crystal-like pieces which can cause potential injury and be a choking hazard for small children. We advise that the glass should be handled with special care and that operation of the product should cease immediately if a fault is found. Breakage due to mishandling is not covered by warranty.
